vibeforces.

LeetCode for Vibecoders.

Shivam Dwivedi · @dwivediishivam

Let's be honest.

LeetCode is dead.

at least for the world we're building in 2026.

The way we build has changed. The way we hire hasn't.

01 80% of startups now use AI-assisted coding as their default workflow.

02 Teams at non-software companies vibe code everything.

03 Yet hiring still tests whether you can reverse a linked list on a whiteboard.

DSA tests measure the wrong skill.

WHAT LEETCODE TESTS	WHAT ACTUALLY SHIPS IN 2026
Memorized algorithms	→ Prompt clarity and precision
Manual code-writing speed	→ Debugging AI-generated code
Textbook data structures	→ Architectural judgment
	→ Knowing when to let AI run

DSA isn't dead. It's just not the full picture anymore. Not even close.

THE INSIGHT

There are mass vibecoders now.

NO STANDARD WAY TO

train

them.

NO STANDARD WAY TO

test

them.

NO STANDARD WAY TO

rank

them.

Until now.

INTRODUCING

vibeforces.

The competitive platform where vibe coders train, rank, and prove they can ship.

01 · TRAIN

5 categories, 3 tiers, rated 800–2000+ like Codeforces.

02 · COMPETE

Live contests with real-time leaderboards.

03 · HIRE

Recruiters build custom tests and share a link.

FOR LEARNERS

How it works.

01

Pick a challenge.

Browse 30 challenges across 5 categories. Each rated 800–2000+ like Codeforces.

02

Write your prompt.

GPT-4.1 is the execution engine. You write prompts. Your skill is how well you communicate.

03

Get scored and ranked.

GPT-5.4-mini judges accuracy, token efficiency, and time. You land on the global leaderboard.

THE CHALLENGE SET

Five ways to test a vibe coder.

01

Spec-to-Prompt

Listen to a voice-note spec. Write the prompt. Scored on output and clarity.

02

Token Golf

Hit the target output in the fewest tokens possible. Efficiency is everything.

03

Bug-Fix Prompting

Broken code. Describe the fix precisely. “Fix this” scores 0.

04

Architecture Pick

AI gives three options. Rank them best-to-worst. Tests judgment, not coding.

05

UI Reproduction

See a screenshot. Write one prompt. AI judges how close your HTML/CSS is.

30 challenges · 3 difficulty tiers per category · rated 800–2000+

One platform. Three audiences.

LEARNERS

Sign up, practice, climb the leaderboard, join live contests. Your gym for prompt skills.

RECRUITERS

Pick challenges, set a timer, share a link. See scores, accuracy, token usage — everything.

ADMINS

Create and schedule contests. Manage the platform. Oversee leaderboards.

FOR COMPANIES

Stop testing the wrong thing.

01 Create a test in 2 minutes — pick challenges, set time, share a link.

02 Candidates take the test on VibeForces — timed, structured, scored automatically.

03 See accuracy, token efficiency, time, and a combined ranking.

04 AI-powered plagiarism detection keeps submissions genuine.

You're not hiring someone who memorized merge sort.
You're hiring someone who can ship with AI.

2
AI MODELS
GPT-4.1 executes, 5.4-mini judges

1
LIVE CONTEST
real-time leaderboards

- → End-to-end scoring: accuracy + token efficiency + time, weighted per category.
- → TTS-generated voice specs & Puppeteer screenshot pipelines.
- → Recruiter test builder with shareable link + results dashboard.
- → Codeforces-style difficulty ratings from 800 to 2000+.

ARCHITECTURE

Under the hood.

FRONTEND · VERCEL

Next.js 14

Tailwind CSS
shadcn/ui
Monaco Editor
Framer Motion

File Storage
Realtime

GPT-4.1 executes user prompts · consistent baseline

GPT-5.4-mini judges submissions · multimodal compare

Today: SD-1 and SD-2.
Tomorrow: the full ladder.

V1 — SHIPPED NOW

- Entry-level challenges (SD-1, SD-2)
- 5 categories · 30 questions
- Single-model execution (GPT-4.1)
- Practice, contests, recruiter tests
- Automated AI scoring

V2 — COMING NEXT

- → Senior & Staff system-design challenges
- → Multi-model: Claude, Gemini, OSS
- → Project-based: “build an app in 2 hrs”
- → AI proctoring & plagiarism detection
- → Team contests & company leaderboards

How VibeForces makes money.

01

Learner Freemium

$12/mo

Unlimited attempts, full library, analytics. Senior tier $29/mo.

02

Recruiter Plans

$49/test

Or $199/mo teams. Enterprise with SSO + ATS.

03

Contest Sponsorships

Custom

Brand a contest, reach top performers directly.

04

Certification

Future

Verified score, shareable badge for LinkedIn & portfolio.

FOR REFERENCE · LeetCode Premium: $35/mo · HackerRank hiring: $100–450/mo · CodeSignal enterprise: $1000s/yr.
The market pays for standardized developer assessment.

The market is moving. Fast.

$500B

GLOBAL AI · 2026

Every company is adopting AI-assisted development.

70%

DEVS · DAILY

Use AI coding tools daily — Copilot, Cursor, Claude Code.

0

STANDARD PLATFORMS

To train or assess this skill. That's the gap.

LeetCode built a $1B+ business on DSA assessment. The vibe-coding assessment market is wide open.

Why this. Why now.

01 · MODELS

AI models just got good enough — GPT-4.1, GPT-5.4, Claude Opus — that vibe coding is no longer a toy. It's production-grade.

02 · DEMAND

Companies already hire “AI-native developers” but have no way to test for it.

03 · GAP

The gap between traditional coding interviews and actual job requirements has never been wider.

04 · FIRST-MOVER

LeetCode, HackerRank and CodeSignal all got there early for DSA. Nobody has claimed vibe coding yet.

— A DECADE OF ASSESSMENT

Every developer assessment platform of the last decade tested one thing:

Can you write code from scratch?

The question for the next decade:

Can you ship with AI?

vibeforces.

LeetCode for Vibecoders.

Train. Compete. Get hired.
